

# MyScript Stylus Mobile

MyScript Stylus is an interactive handwriting recognition application that allows text input on stylus/finger-based touch-screen devices such as Mobile Internet Devices or smartphones.

This powerful text input method converts natural handwriting into digital text in real-time and inserts it in the active application. MyScript Stylus is an alternative to the keypad or the virtual keyboard for use in any application requiring text entry such as SMS, emails, text editors, calendar, task manager, etc.

## MyScript Stylus, a text input method for mobile devices

Whatever the application you are using on your mobile device, you can enter text through handwriting. With MyScript Stylus, you can write SMS, emails, browser searches, enter a destination on your GPS or update your calendar using natural handwriting. It's that simple!

## An easy to use and highly accurate text input method

What's more natural than using handwriting to create text? With MyScript, write directly on your touch-screen device and watch your writing instantly converted into text in the active application!

Adapted to any touch-screen device (resistive, capacitive, multi-touch), MyScript Stylus recognizes your handwriting in more than 25 languages with the market's best recognition accuracy.

## How does it work?

### 1/ Write your message

- Write with your finger or a stylus on the writing area which scrolls over progressively to enable you to write long words and phrases. Your handwriting is converted to digital text and displayed on the text bar in real time.

### 2/ Edit your text

- **Choosing the appropriate word:** If the recognized word is not the one you were expecting, choose the appropriate word among the list of alternatives displayed on top of the application. MyScript Stylus even recognizes unconventional text like acronyms, abbreviations, etc.
- **Inserting:** You want to insert a word in the text you just have written? Simply place the cursor on the appropriate place and write your text in the writing area.
- **Deleting:** You can edit your text by deleting words or entire phrases with intuitive gestures or using editing buttons.

### 3/ Validate your entry

## FEATURES

### ✔ Natural handwriting recognition

Any word from the dictionary, digits and punctuation marks are recognized. You can write naturally in the writing area either in *cursive handwriting* or *hand printed style*.

The recognized words are automatically displayed on the text bar. If you are not satisfied by the recognition result, choose the expected word among candidates displayed on the top of the application window.

### ✔ Specific writing modes

To optimize recognition accuracy of specific entries such as numbers, URLs or email addresses, you can choose the appropriate writing mode.

### ✔ Display modes

MyScript display is adjusted according to your movements:

### ✔ Gesture recognition & text editing

MyScript Stylus recognizes gestures to improve the user experience:

- Insert spaces
- Delete text
- Insert line breaks

### ✔ Widest language support

Vision Objects consistently develops new languages through a perfectly mastered industrial process based on the collection of complete writing samples which has proved its worth, as today, accuracy rates beat all records.

MyScript Stylus recognizes natural handwriting in 25 languages:

- Chinese (Simp. & Trad.)
- Danish
- Dutch
- English (Can./ UK/ USA)
- Finnish
- French (Can./ Fr.)
- German
- Greek
- Hungarian
- Italian
- Japanese
- Korean
- Norwegian
- Polish
- Portuguese (Br./ Port.)
- Russian
- Spanish (Mex./ Sp.)
- Swedish
- Turkish

For further details, please refer to the data sheet entitled "Lingo & Letra".

### ✔ Technical specification

#### Disk space:

Depends on language type and number (e.g.: < 1.6 MB for one Latin language).

### 🔧 OEM: Add value to your hardware!

MyScript Stylus can be integrated as a standalone application or customized to your specific requirements (specific writing styles, look and feel, branding, operating systems, etc).

To learn more about how MyScript Stylus can be adapted to special needs, please contact Vision Objects' sales team through the contact form on our website ([www.visionobjects.com](http://www.visionobjects.com)).
